

Lab 3: feedback

Archives

- a zip file that contains jar files and Java sources. The Java sources should be in the jar files
- the jar file is executable and contains the sources

Execution

- the help message is that of the file sender program

Source code

- no documentation
- I don't understand your program. Example: in the main method, you create a `GossipingClient` instance, and then invoke its `offerMessage` method, that invokes the `Client.main` method
